### **DETAILED ACTION**

Claims 19 and 20 are withdrawn from further consideration pursuant to 37 CFR 1.142(b), as being drawn to a nonelected invention, there being no allowable generic or linking claim. Applicant timely traversed the restriction (election) requirement in the reply filed on 11/28/08.

Applicant's election with traverse of claims 1-18 in the reply filed on 11/28/08 is acknowledged. The traversal is on the ground(s) that claim 1 is generic. This is not found persuasive because claim 1 claims the structure of two dice while the unelected invention claims a method of selling space, producing and distributing dice.

The requirement is still deemed proper and is therefore made FINAL.

### ***Claim Rejections - 35 USC § 101***

35 U.S.C. 101 reads as follows:

Whoever invents or discovers any new and useful process, machine, manufacture, or composition of matter, or any new and useful improvement thereof, may obtain a patent therefor, subject to the conditions and requirements of this title.

Claims 11-18 are rejected under 35 U.S.C. 101 because these are method claims that are not tied to another statutory class (such as a particular machine) nor do they transform underlying subject matter (such as an article or materials) to a different state or thing. See *Diamond v. Diehr* 450 U.S. 175, 184 (1981) (quoting *Benson*, 409 U.S. at 70); *Parker v. Flook*, 437 U.S. 584, 588n.9 (1978) (citing *Cochrane v. Deener*,

94 U.S. 780, 787-88 (1876). See also *In re Comiskey*, 499 F. 3d 1365, 1376 (Fed. Cir. 2007)(request for hearing en banc pending).

Independent claim 11 is drawn to a process but does not precisely recite another statutory class. Thus, there is no tie to another statutory class, and so the claims do not meet this step.

***Claim Rejections - 35 USC § 102***

The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless –

(b) the invention was patented or described in a printed publication in this or a foreign country or in public use or on sale in this country, more than one year prior to the date of application for patent in the United States.

***Claim Rejections - 35 USC § 103***

The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negated by the manner in which the invention was made.

Claims 1-18 are rejected under 35 U.S.C. 102(b) as anticipated by or, in the alternative, under 35 U.S.C. 103(a) as obvious over Lipman (233).

Lipman discloses a Dice Game.

Regarding claims 1-18, Lipman teaches a first dice with indicia (information) and a second dice with indicia relating to that of the first dice and a method of play therefrom (see abstract and figures). Lipman fails to teach that his indicia relates to consumables. It would have been obvious to one having ordinary skill in the art at the time the invention was made to use any indicia desired since it would only depend on the intended use of the assembly and the desired information to be displayed. Further, it has been held that when the claimed printed matter is not functionally related to the substrate it will not distinguish the invention from the prior art in terms of patentability. *In re Gulack*, 217 USPQ 401, (CAFC 1983). The fact that the content of the printed matter placed on the substrate may render the device more convenient by providing an individual with a specific type of indicia does not alter the functional relationship. Mere support by the substrate for the printed matter is not the kind of functional relationship necessary for patentability. Thus, there is no novel and unobvious functional relationship between the printed matter and the substrate which is required for patentability.
